

PAC-NeRF: Governing Equations

$\mathbf{F}$ = Deformation gradient

$\mathbf{T}$ = Stress Tensor

 $J\mathbf{F} = \det(F)$

Material	Cauchy Stress Tensor
Elasticity	$J\mathbf{T}(\mathbf{F}) = \mu(\mathbf{F}\mathbf{F}^T) + (\lambda \log(J) - \mu)\mathbf{I}$
Newtonian Fluid	$J\mathbf{T}(\mathbf{F}) = \frac{1}{2}\mu \left(\nabla \mathbf{v} + \mathbf{v}^T \right) + \kappa \left(J - \frac{1}{J^6} \right)$
Plasticine	$J\mathbf{T}(\mathbf{F}) = \mathbf{U} \left(2\mu\epsilon + \lambda Tr(\epsilon) \right) \mathbf{U}^T$
