

D-NeRF: Implementation Details

Then apply canonical network Ψ_x

D-NeRF: Implementation Details

$$C(\mathbf{r}) = \int_{h_n}^{h_f} T(h, t) \sigma(\mathbf{p}(h, t)) \mathbf{c}(\mathbf{p}(h, t), \mathbf{d}) dh$$

$$\mathbf{p}(h, t) = \mathbf{x}(h) + \Psi_t(\mathbf{x}(h), t)$$

$$[\mathbf{c}(\mathbf{p}(h, t), \mathbf{d}), \sigma(\mathbf{p}(h, t))] = \Psi_x(\mathbf{p}(h, t), \mathbf{d})$$

$$T(h, t) = \exp \left(- \int_{h_n}^h \sigma(\mathbf{p}(s, t)) ds \right)$$
